Document Automation:

A key to unlocking increased profits and minimizing risk

How Can You Best Prepare and Potentially Thrive in an Economic Downturn?

Document Automation systems *-- in contrast to many other IT investments - typically offer a solid return on the investment when executed well*

- Smart companies will turn the current economic climate to their advantage.

  They will focus far less on new fads and trends, and get back to basics:

  - reducing paper mountains
  - automating processes
  - mitigating against risk

This Presentation Will Answer Three Questions

What is Document Automation?

- Automate Conditional Text
- Automate Variable Text
- Automate Data

What are the benefits of document automation?

- Increase productivity
- Improve accuracy
- Improve profitability
- Automate knowledge

How does document automation work?

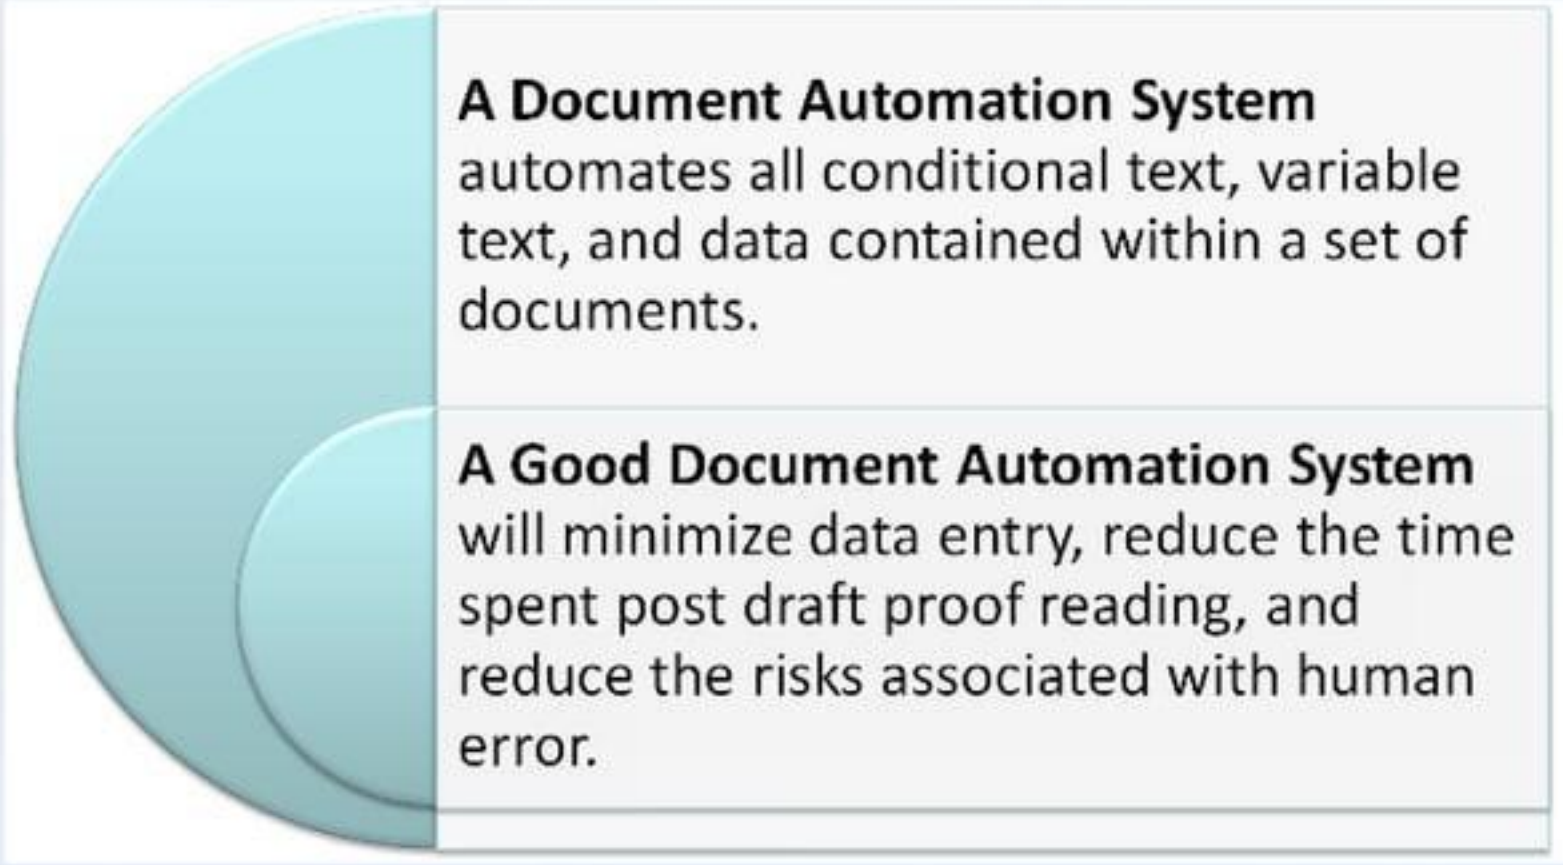

Five step process

1) Create document template
2) Connect to data
3) Automate special language and data
4) Synchronize changes to server
5) Generate transaction

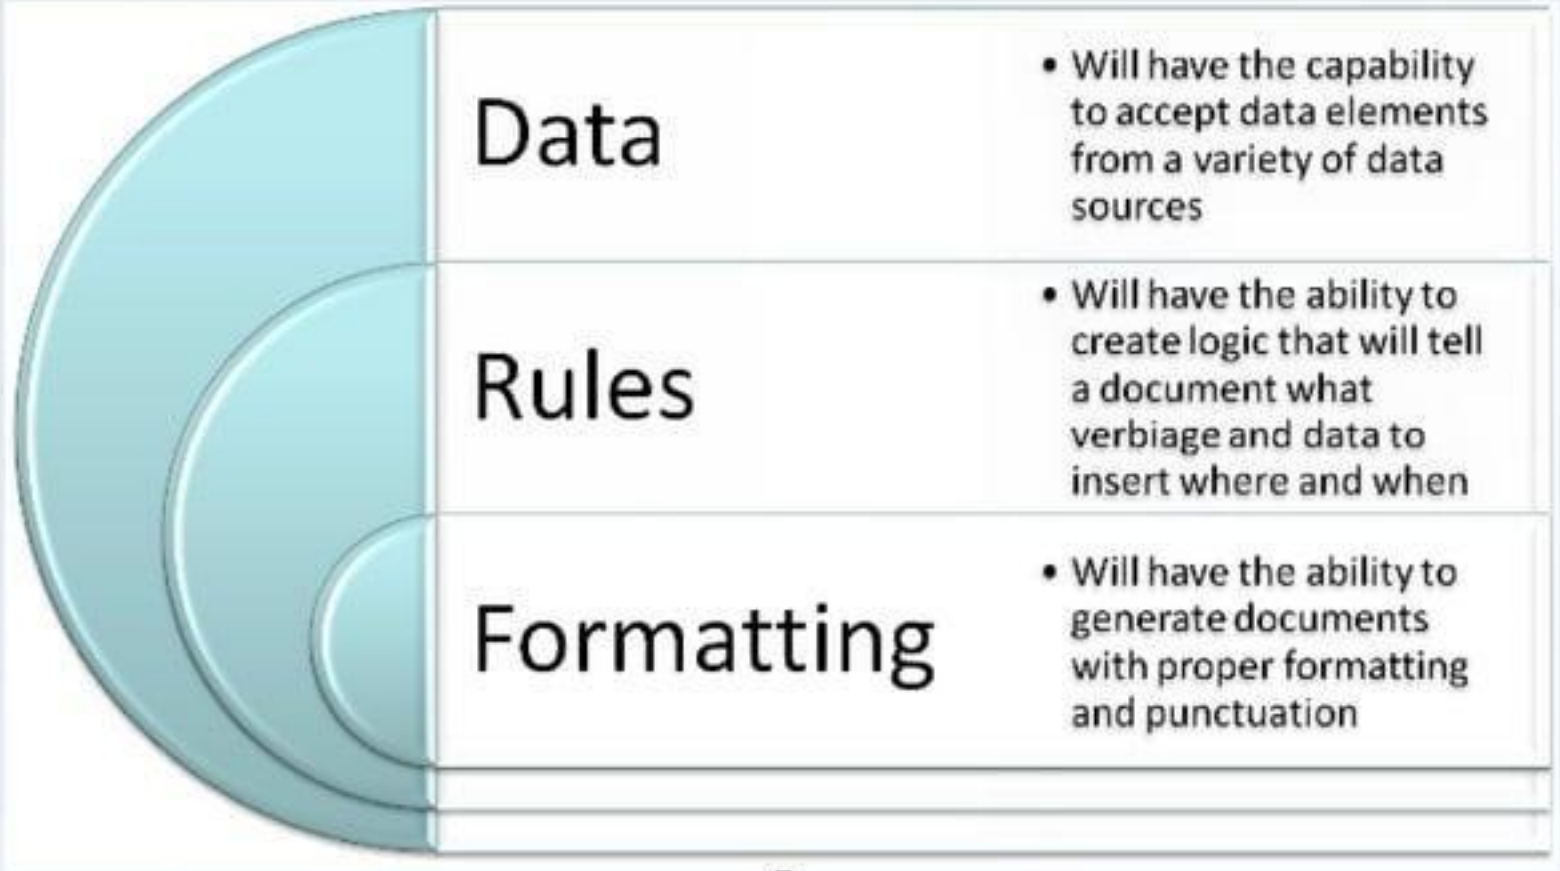

What is Document Automation?

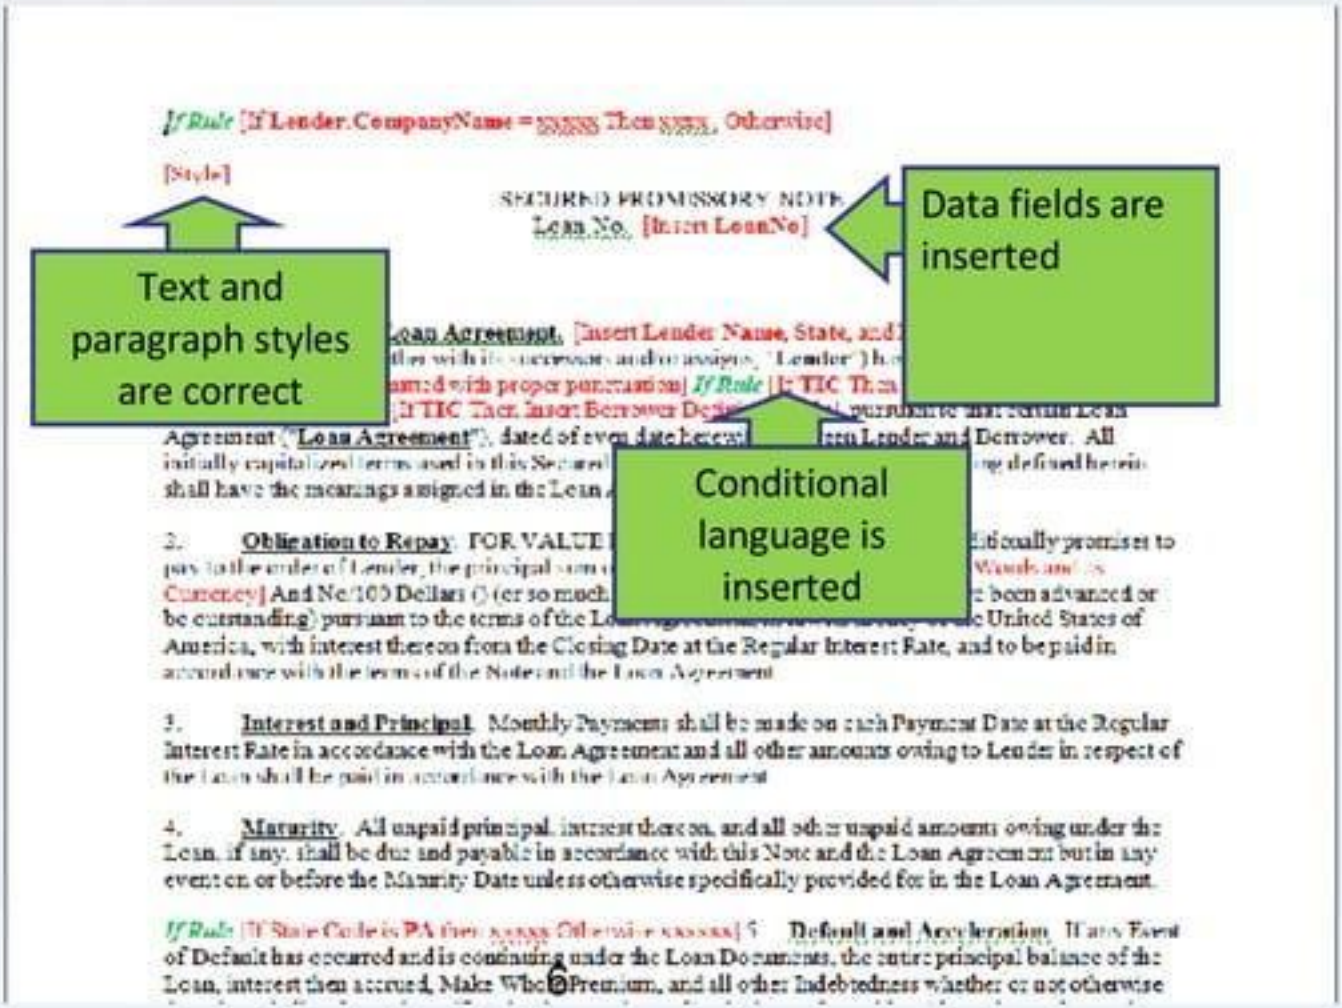

What is Document Automation?

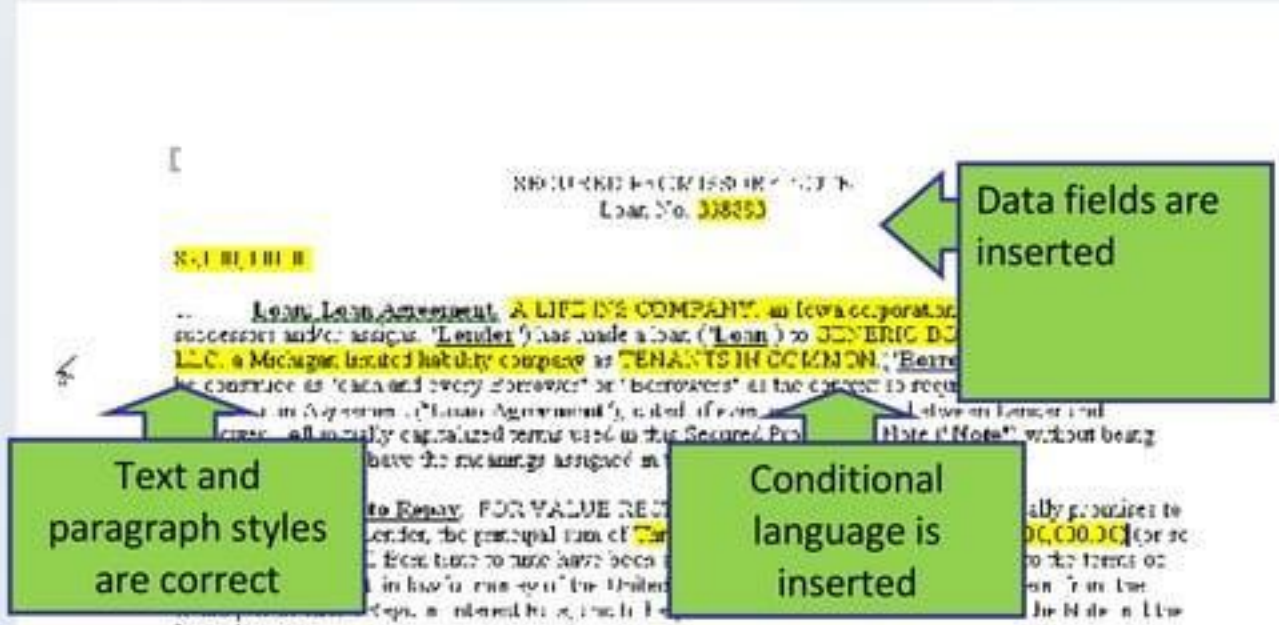

A True Document Automation System Combines:

Promissory Note Example

Generated Promissory Note

Loan No. 338853

Loan Agreement

Note

Loan Agreement

Note

Loan Agreement.

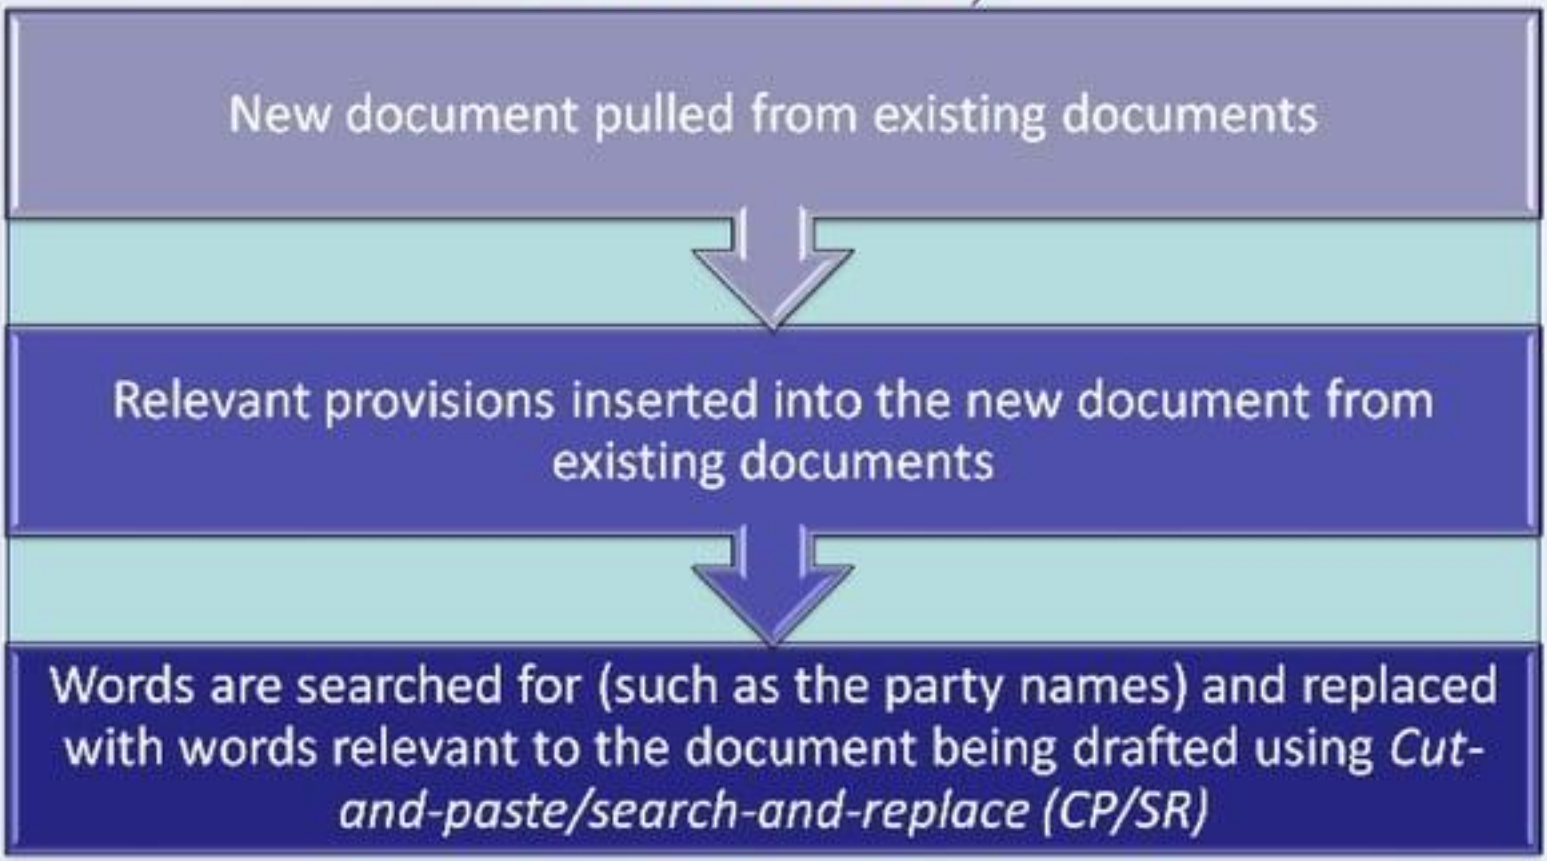

3. **Interest and Principal**. Monthly Payments shall be made on each Payment Date at the Regular Interest Rate in accordance with the Loan Agreement and all other amounts owing to Lender in respect of the Loan shall be paid in accordance with the Loan Agreement.

4. **Maturity**. All unpaid principal, interest thereon, and all other unpaid amounts owing under the Loan, if any, shall be due and payable in accordance with this Note and the Loan Agreement but, in no event, on or before the Maturity Date unless otherwise specifically provided for in the Loan Agreement.

5. **Default and Acceleration**. If any Event of Default has occurred and is continuing under the Loan Document, the entire unpaid principal balance of the Loan, all accrued but unpaid interest, and all other sums due under the Loan Documents shall, at the option of Lender, become immediately due and payable without demand or notice, and whether or not Lender has exercised said option, interest shall accrue on the entire principal balance, interest then accrued, Make Whole Premium and any other indebtedness then due, at a rate equal to the Default Rate until fully paid.

Benefits of Document Automation

Current Drafting Process (*no automation*)

Weakness of Current Process

High margin for error because CP/SR is:

- Unstructured
- Relies on memory
- Assumes the word processor will catch all the items to be replaced

CP/SR is Slow, more steps create:

- More Mistakes
- Slower Drafting

Benefits of Document Automation

In the past there was little incentive to improve the process

- Hourly billing gave no incentive to change
- There were no technological alternatives

Benefits of Document Automation

Times Have Changed

- Flat Fee billing has emerged creating incentive to assemble documents faster
- Competition has increased significantly
- Technology has emerged that allow firms to assemble accurate documents quickly

Benefits of Document Automation

Benefit #1 Speed

- Nothing will have a greater impact on a document intensive practice

Assume you have a complex document with hundreds of optional paragraphs

- Presently takes 4 to 5 hours to create a final draft
- After converting the document to an AjlDoc the same document generation should take 4 to 5 minutes

Benefits of Document Automation

Benefit #2 Accuracy

- When a transaction is generated the template does all the work:
  - Pulls in all customer and transactional data
  - Includes appropriate paragraphs while excluding Irrelevant ones
  - Styles
  - Calculating numbers and dates
  - Verb conjugation

Benefits of Document Automation

Benefit #3 Profitability

- Generate more accurate documents in far less time while using fewer resources
- Estate Planning Example
  - **Before automation** 10 hours for initial meeting and document drafting
  - Flat fee of $2000/10 = $200 per hour
  - **After automation** time drops to 2.5 hours
  - Flat fee of $2000/2.5 = $800 per hour

Benefits of Document Automation

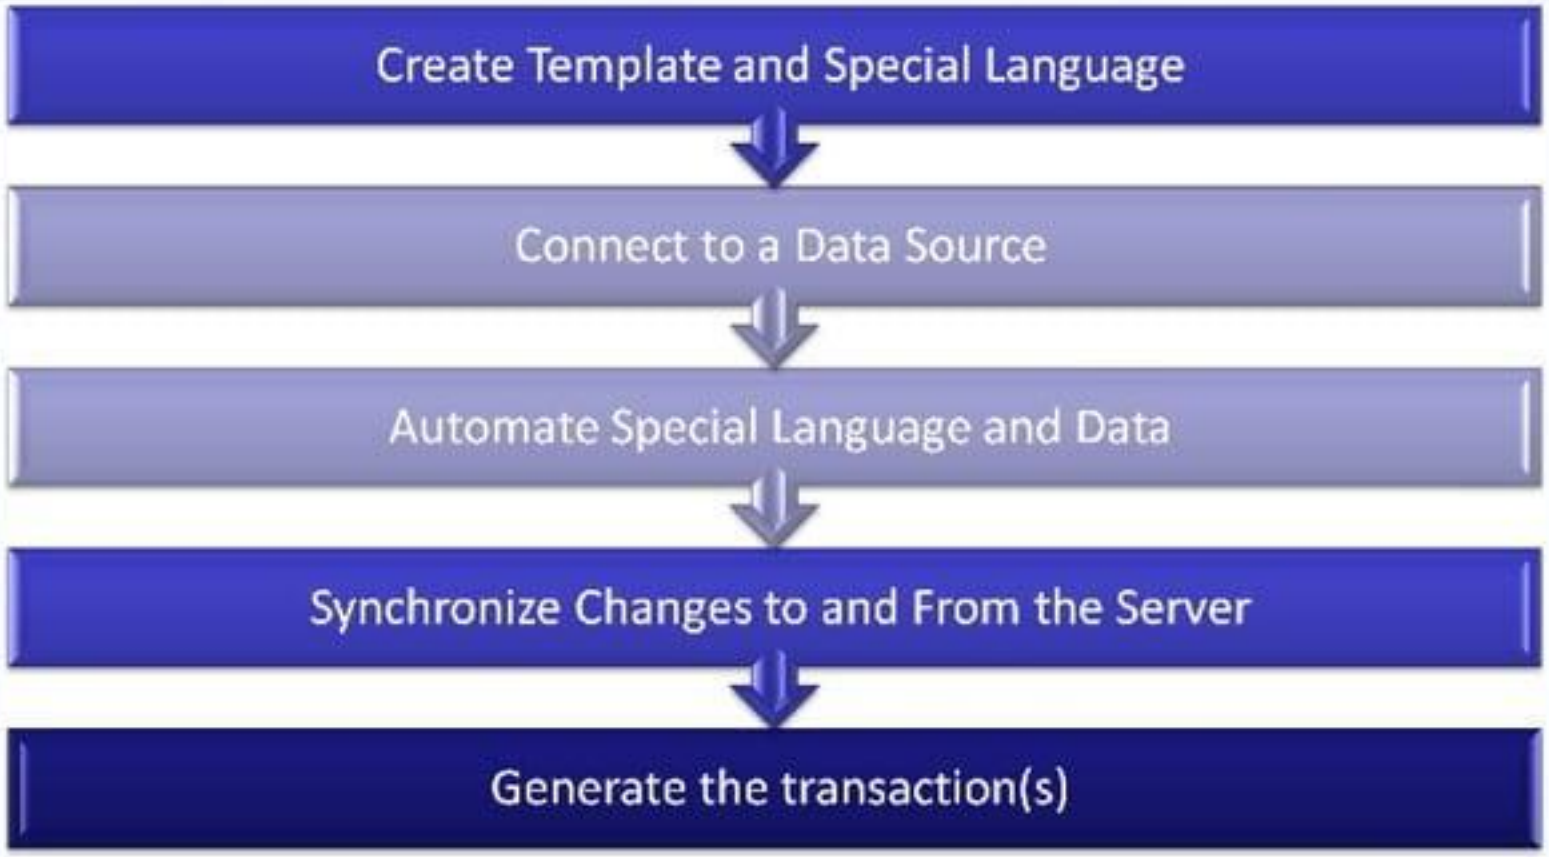

Benefit #4 Knowledge Automation

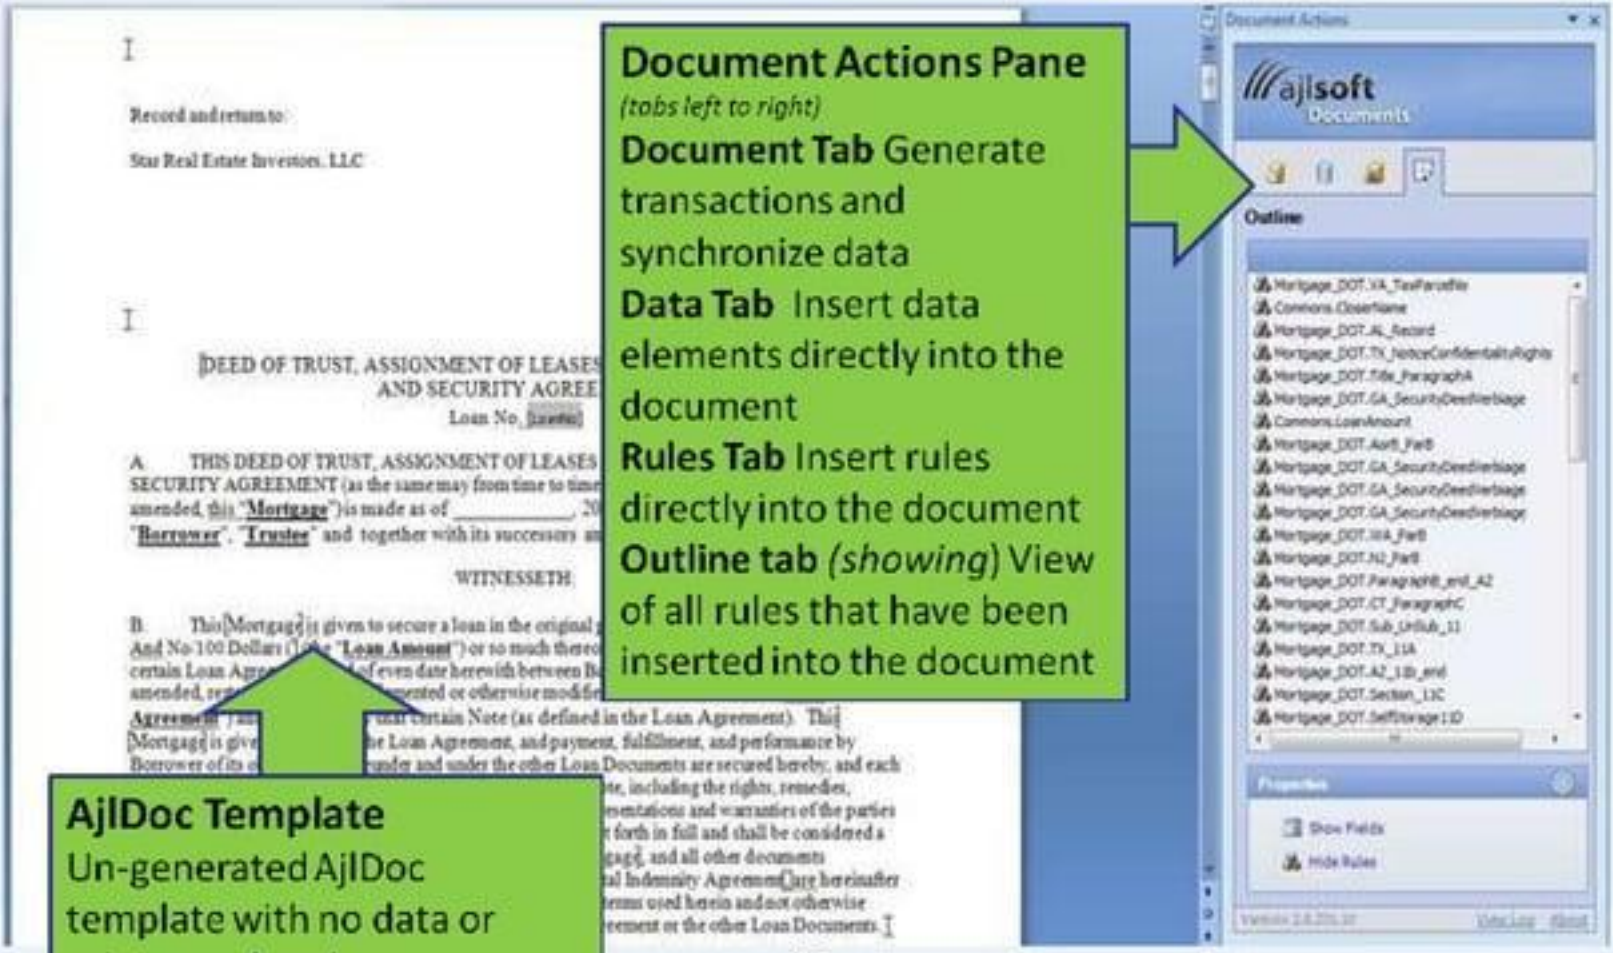

- Allows SME's to combine their knowledge about a given practice area. New associates are then able to:
- Use the latest form the firm has prepared
- Address all issues required for the document type
- Generate documents minutes instead of hours

How Does Document Automation Work?

What is the Document Generation Process?

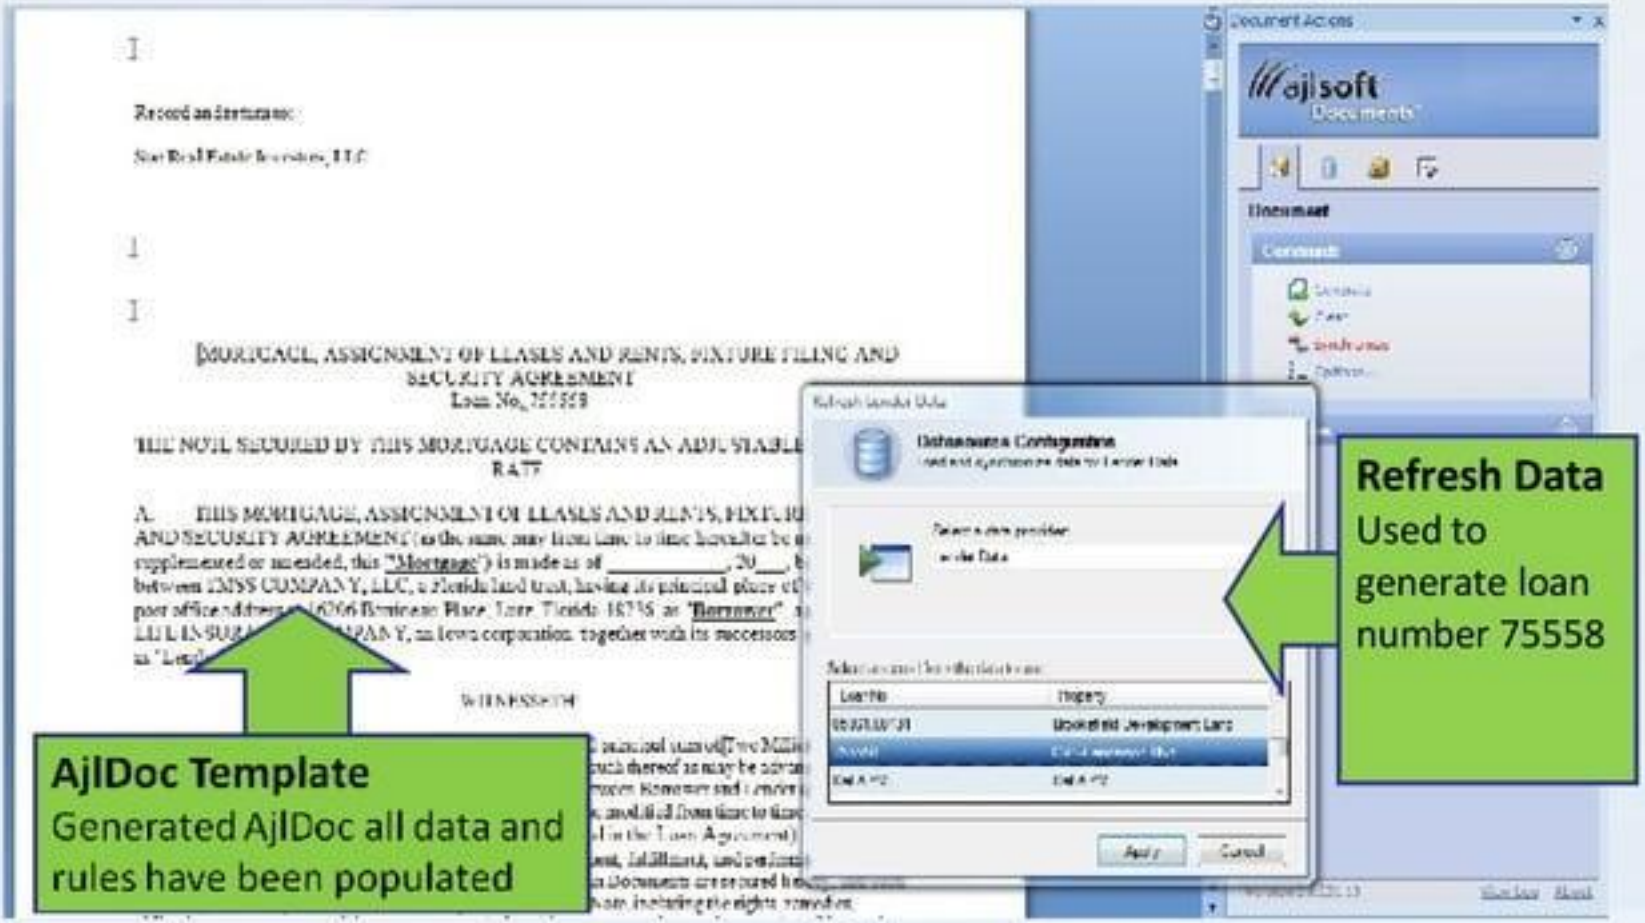

AjlDoc Un-Generated Transaction

Document Actions Pane
(tabs left to right)
Document Tab Generate transactions and synchronize data
Data Tab Insert data elements directly into the document
Rules Tab Insert rules directly into the document
Outline tab *(showing)* View of all rules that have been inserted into the document

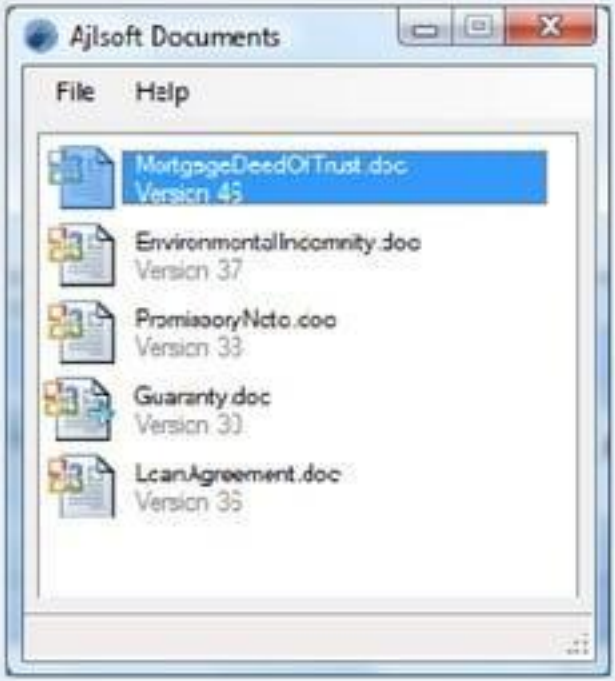

AjlDoc Template
Un-generated AjlDoc template with no data or rules populated

AjlDoc Generated Transaction

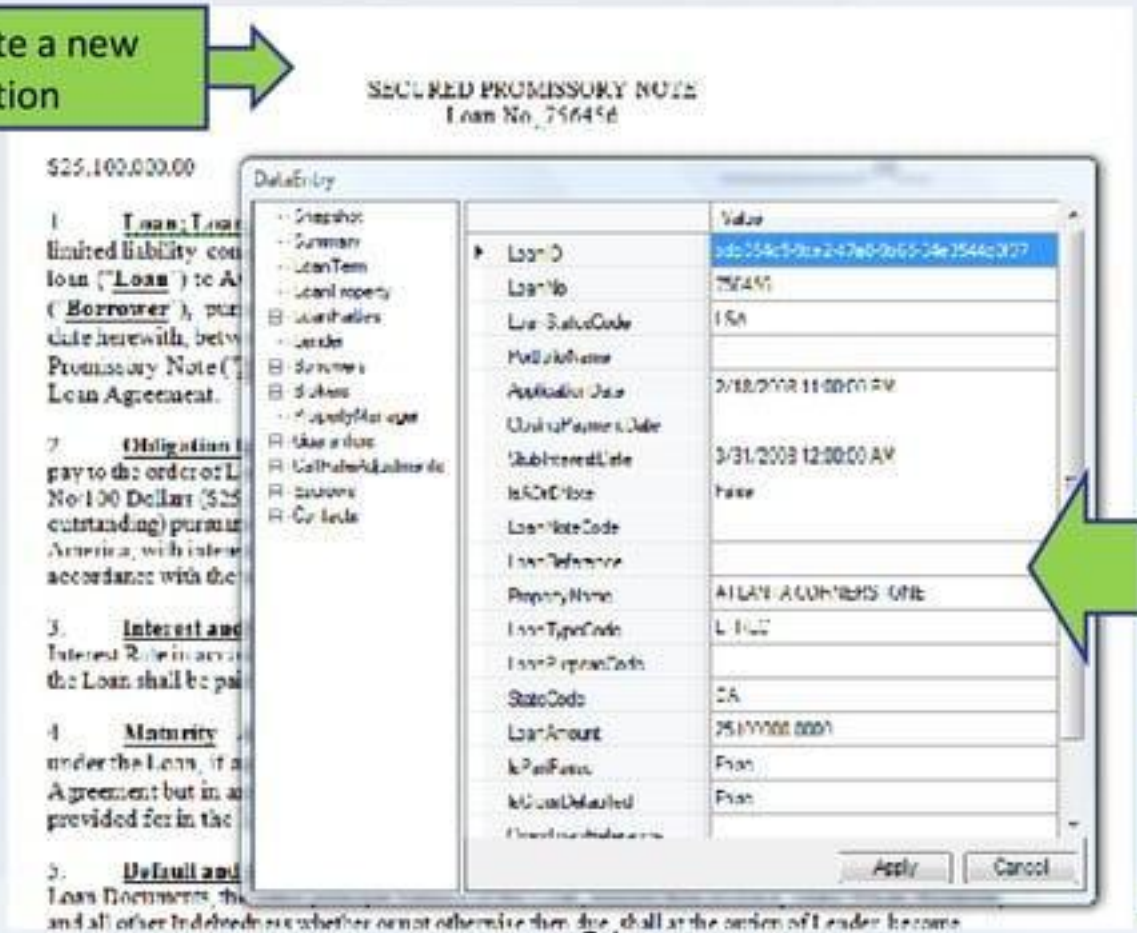

The AjlSuite

- Encapsulate an entire set of transaction documents into one file
- Easy to collaborate, easy to update
- Data can be changed from the document and updated to the data source

Change Data Bi-Directionally

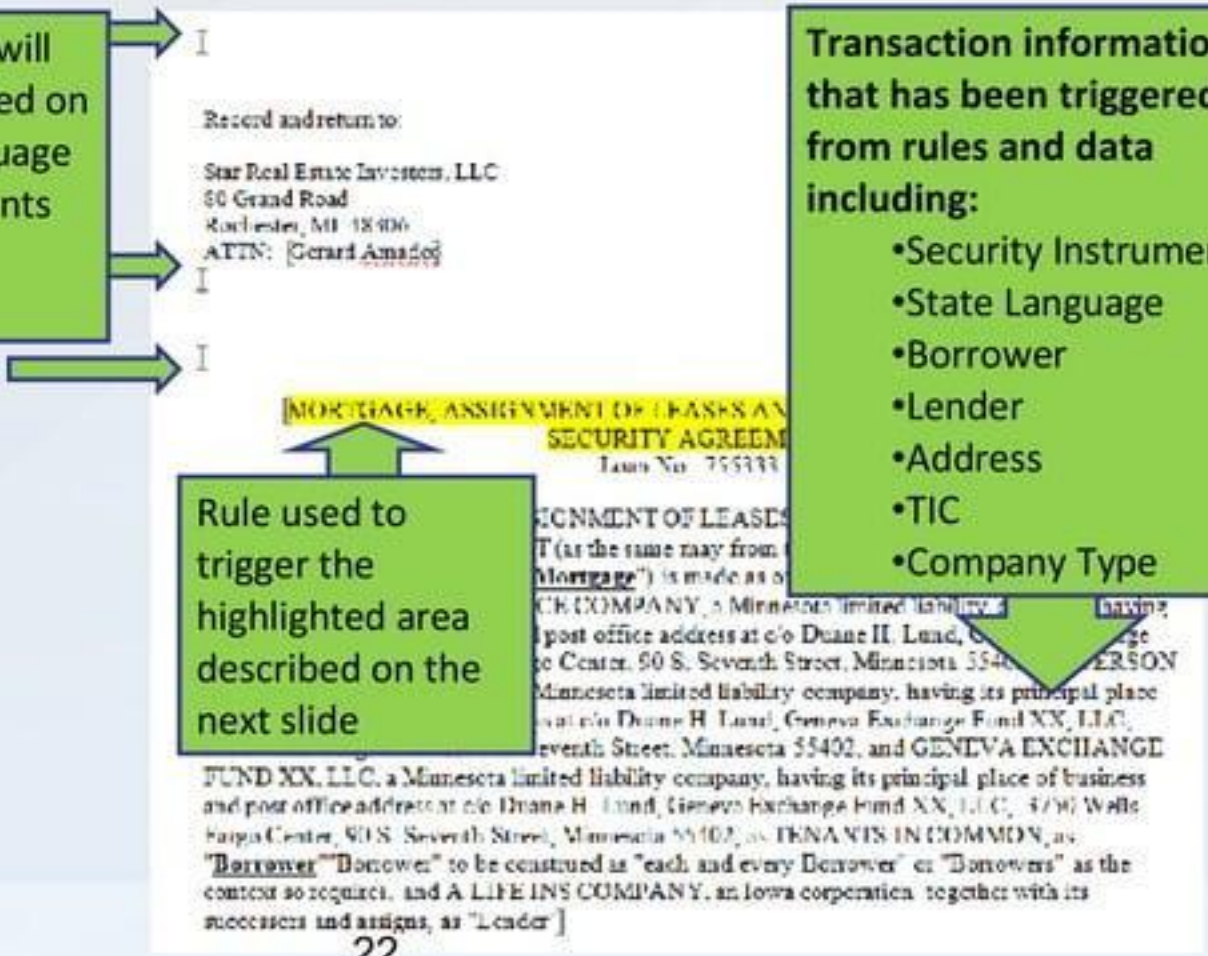

Generate a new transaction

Change Data From the document and synchronize the change back to the data source

Generated Mortgage Document

Rules that will trigger based on State Language Requirements

Rule used to trigger the highlighted area described on the next slide

Transaction information that has been triggered from rules and data including:

- Security Instrument
- State Language
- Borrower
- Lender
- Address
- TIC
- Company Type

Rule Behind the Mortgage Title

The Mortgage in the previous example is not:

- A Georgia transaction
- A Mortgage with state code OH
- A Mortgage
- A non-Mortgage that Has Future Advances

Since it us none of the above it prints the final otherwise

No Scripting Needed

State or Commonwealth Example

```
IF "massachusetts virginia kentucky pennsylvania" CONTAINS State Name
    "The Commonwealth of «State Name»"
ELSE
    "The State of «State Name»"
END IF
```

With HotDocs a script needs to be manually typed and is then triggered based on a questionnaire

With AjlSoft rules are easily created using drag and drop tools. The rules trigger based on information from the data source

Document Automation Conclusion

D.A. Definition

Automation of all conditional text, variable text, and data contained within a set of documents

D.A. Benefits

Increase productivity

Improve accuracy

Increase profitability

Automate knowledge

D. A. Process

1) Create a document template
2) Connect document to data
3) Automate language and data
4) Synchronize changes to server
5) Generate transaction
